SUMMARY

Product leader with ten years across every stage of company-building. Have built and scaled software for governments, donors, enterprises and consumers, with deep domain experience in healthcare and platform thinking that travels across categories. Currently founder and CEO of HappiNest, India's first maternal mental health platform.

EXPERIENCE

HappiNest, Bengaluru

Founder & CEO | Oct 2023 – Present

Sole founder. Bootstrapped to profitability. 4x revenue growth in twelve months.

- Built HappiNest into four distinct mental health journeys, each with its own clinical pathway and protocols: pregnancy wellness, support for IVF and miscarriage, postpartum counselling, and parenting support for the toddler years.
- Adapted the Edinburgh Postnatal Depression Scale (EPDS) for Indian context and turned it into a [free self-assessment](#) available for new mothers to identify where they are and what kind of support would be useful.
- Run a performance marketing engine across Meta and Google. Own the creative direction, funnel and unit economics end to end. CAC, conversion rate and lifetime revenue per cohort are tracked monthly and inform every decision.
- Designed the operational backbone: booking on Zoho integrated into the site, fitment calls before paid sessions, assessment-driven matching to suggest the right support, follow-up cadences and retention tracking for each therapist.
- Wear every hat the business needs: clinician (drawing on my medical training to design programmes and train therapists), product builder (the website, assessments, resources, blog, community), marketer (the full acquisition motion) and operator (P&L, pricing, partnerships).

Everwell Health Solutions, Bengaluru

Senior PM → Principal PM | Apr 2020 – Mar 2024

Led the product vertical for the organisation. 5 PMs and designers reporting in. Two product lines: Nikshay (Government of India) and Everwell Hub (16 countries).

- Owned product strategy and outcomes for both lines. Built the product team from one person to five, including hiring, performance reviews and career growth.
- Nikshay: India's national TB platform with 2.64 million active patients. Worked with the Ministry of Health, donors and frontline staff to ship data dashboards, active case screening, follow-up task lists, adverse reaction reporting, teleconsultation and AI-powered diagnostic tools.
- Everwell Hub: rebuilt the open-source SaaS that supports TB, HIV, mental health and maternal health programmes across 16 countries. Cut client deployment time from two weeks to half a day.
- Built reusable microservices for communication (SMS, IVR, WhatsApp), adherence tracking and hierarchy and role management. Every programme on the platform now runs on these.
- Represented the product function at executive reviews, conferences and donor meetings with BMGF, USAID and KNCV.

Future World Studios, California

VP of Product | Sep 2019 – Mar 2020

VR for healthcare in 2019, before consumer VR had any playbook to follow. Also ran the India operation.

- Led product for immersive VR applications in healthcare: physician training and reducing patient anxiety in complex procedures.
- Ran the India back office end to end. Payments, salaries, insurance, vendor contracts and day-to-day operations.

eKincare, Hyderabad

Product Manager | Feb 2017 – Aug 2019

Employee health. Includes my earlier role at Celes Care, which eKincare acquired in 2017.

- Took the Progressive Web App from concept to launch. The PWA became a lighter second surface that removed install friction and reached lower-spec Android users.
- Built the recommendation engine that surfaced relevant health journeys based on user profile, claims history and engagement patterns.
- Shipped four condition-management programmes (pregnancy, smoking cessation, diabetes, hypertension) and telemedicine. Each had its own clinical content, escalation logic and engagement design.
- Led the integration with JioHealthHub, Reliance Jio's captive health platform, putting the product in front of one of the largest digital subscriber bases in India.
- Solved the hardest problem in employee health: getting employees to engage with a product their HR is paying for. Wellness challenges, fitness tracking, referral rewards.
- Built partnerships across pharmacy, gyms and EAP solutions. Redesigned the HR-facing dashboard. Built a tiered feature activation system so clients could buy features they needed.
- As first PM at Celes Care (acquired by eKincare in 2017): revamped the Android app and shipped pregnancy, period and BMI trackers.

Portea Medical, Bengaluru

Assistant Product Manager | Feb 2016 – Feb 2017

First PM role. Where I learned the business of building.

- Launched two new nursing service divisions: Homecare for IVF Patients and ICU at Home.
- Built the pricing model and profitability matrix from scratch, working directly with the business team.
- Monthly customer engagement campaigns drove the unit's revenue up 185% in twelve months.

EDUCATION

MBA, Hospital and Healthcare Management | IIHMR University, Jaipur | 2014 – 2016 | 81%

Bachelor of Dental Surgery (BDS) | Saraswati Dental College, Lucknow | 2009 – 2014 | Gold Medallist

SKILLS

- **Product:** Strategy, zero-to-one builds, SaaS and platform thinking, user research, growth experimentation.
- **Leadership:** Cross-functional teams, hiring and team building, stakeholder management, donor and government partnerships.
- **Business:** P&L ownership, pricing and unit economics, go-to-market, founder operations.
